

BEFORE THE  
STATE OF NEW YORK  
PUBLIC SERVICE COMMISSION

---

In the Matter of  
Consolidated Edison Company of New York, Inc.

Case 09-E-0428

August 2009

---

Prepared Testimony of:  
Staff Policy Panel

Andrew Harvey  
Principal Economist  
Office of Regulatory Economics

Kevin Higgins  
Utility Supervisor  
Office of Accounting & Finance

Marco Padula  
Utility Supervisor  
Office of Electric, Gas and  
Water

New York State  
Department of Public Service  
Three Empire State Plaza  
Albany, New York 12223-1350

- 1 Q. Would the members of the Staff Policy Panel  
2 please state your names, employer, and business  
3 addresses?
- 4 A. Andrew Harvey, Kevin Higgins and Marco Padula.  
5 We are employed by the New York State Department  
6 of Public Service (DPS or the Department). Our  
7 business address is Three Empire State Plaza,  
8 Albany, New York 12223.
- 9 Q. Mr. Harvey, what is your position in the  
10 Department?
- 11 A. I am a Principal Economist in the Office of  
12 Regulatory Economics. I joined the Department  
13 in 1974.
- 14 Q. Please summarize your educational and  
15 professional background.
- 16 A. I hold Bachelor of Arts and Master of Arts  
17 degrees in Economics from the State University  
18 of New York at Albany.
- 19 Q. Have you testified in any prior proceedings?
- 20 A. Yes. I have testified in about 50 proceedings  
21 before the New York State Board on Electric  
22 Generation Siting and the Environment and the  
23 New York State Public Service Commission  
24 (Commission) on a wide range of economic issues.

1 Q. Mr. Higgins, what is your position at the  
2 Department?

3 A. I am employed as a Supervisor in the Office of  
4 Accounting and Finance. I joined the Department  
5 in June 1987.

6 Q. Please briefly describe your educational  
7 background and professional experience.

8 A. I am a graduate of the State University College  
9 of New York at Oneonta with a Bachelor of Arts  
10 degree in Business Economics. I have also  
11 earned an Associates degree in Accounting from  
12 Morrisville State College.

13 Q. Please describe your responsibilities with the  
14 Department.

15 A. My work as a Supervisor includes the examination  
16 of accounts, records, documentation, policies  
17 and procedures of regulated utilities so as to  
18 develop issues for electric, gas,  
19 telecommunications and water rate proceedings,  
20 financing petitions, rate of return studies and  
21 other general accounting matters.

22 Q. Mr. Higgins, have you previously testified  
23 before the Commission?

24 A. Yes, I have testified in many proceedings, most

1 recently in Consolidated Edison Company of New  
2 York's (Con Edison or the Company) last electric  
3 rate case (Case 08-E-0539).

4 Q. Mr. Padula, what is your position in the  
5 Department?

6 A. I am employed as a Utility Supervisor in the  
7 Rates and Tariffs Section of the Office of  
8 Electric, Gas and Water. I joined the Department  
9 in 1994.

10 Q. Mr. Padula, please briefly state your  
11 educational background and professional  
12 experience.

13 A. I received a Bachelor of Science Degree in  
14 Electrical Engineering from Northeastern  
15 University in 1990 and Master of Business  
16 Administration from Rensselaer Polytechnic  
17 Institute in 1998. From 1990 to 1994 I was  
18 employed by IBM as an Electrical Engineer  
19 responsible for the design and development of  
20 high performance power/thermal control systems  
21 for mainframe computers.

22 Q. Please briefly describe your current  
23 responsibilities with the Department.

24 A. My current responsibilities include electric and

1 steam utility revenue allocation and rate  
2 design, computer simulation of electricity  
3 production, transmission and pricing, and  
4 wholesale electric market issues. I also serve  
5 as Staff co-leader on Con Edison electric and  
6 steam rate cases.

7 Q. Have you previously testified before the  
8 Commission?

9 A. Yes. I have testified on operating and  
10 maintenance expenses in Cases 94-G-0885 and 03-  
11 S-1672 and on embedded cost of service studies  
12 and rate design in Case 04-E-0572, Case 05-S-  
13 1376, Case 07-E-0523, Case 07-S-1315, and, the  
14 Stand-by Service proceedings.

15 Q. Panel, what is the purpose of your testimony?

16 A. We will discuss the austerity measures reflected  
17 by Con Edison in its rate request for the rate  
18 year ending March 31, 2011. Next, we will  
19 address the supplemental testimony of the  
20 Company's Property Tax Panel. We will also  
21 discuss the Company's proposal for a three-year  
22 rate plan, following which we present Staff's  
23 proposal for a three-year rate plan for the  
24 Company. Finally, we will discuss the impact of

1 the Commission's recent Order in Case 08-M-0152  
2 (Comprehensive Management Audit of Consolidated  
3 Edison Company of New York, Inc.), and what  
4 should be done in this proceeding.

5 Q. Is the Panel sponsoring any Exhibits?

6 A. Yes, we are sponsoring two exhibits.

7 Exhibit\_\_ (SPP-1) contains responses to DPS Staff  
8 Information Request (IR) that we refer to and  
9 have relied upon in our testimony.

10 Exhibit\_\_ (SPP-2) contains historical data of the  
11 Gross City Product of New York City (GCPNYC), as  
12 calculated by the City of New York, Office of  
13 Management and Budget (CNYOMB).

14 **Austerity Program**

15 Q. The Commission's Order in Case 08-E-0539, Con  
16 Edison - Electric Rates (2009 Rate Order), page  
17 344, states that Con Edison should include in  
18 its next rate filing, or within not more than 30  
19 days thereafter, testimony describing the  
20 Company's austerity program efforts it plans to  
21 continue beyond the rate year ended March 31,  
22 2010, correct?

23 A. Yes.

24 Q. Did Con Edison submit testimony addressing this

1 directive in its rate case filing?

2 A. At the time of its initial testimony, Con Edison  
3 had not yet finalized its response to the  
4 Commission with respect to its austerity budget.  
5 However, Con Edison reflected, as a placeholder,  
6 an adjustment of \$30 million reducing its rate  
7 request pending the filing of supplemental  
8 testimony.

9 On June 8, 2009, Con Edison filed  
10 supplemental testimony presenting its austerity  
11 program for the rate year ending March 31, 2001.  
12 The Company identified cost reduction measures  
13 taken that reduce its rate request by \$22.6  
14 million, in place of the \$30 million it  
15 originally reflected.

16 Q. Would you briefly explain Con Edison's rate year  
17 austerity program?

18 A. Yes. Con Edison's austerity program includes  
19 three categories of cost saving measures. The  
20 first category involves labor and labor-related  
21 costs and includes reductions of base salaries  
22 for executives, and senior and mid-level  
23 management, as well as 401(K) matching and  
24 discount stock purchase plan reductions that

1 apply to management employees. The Company  
2 indicated that, except for the salary reductions  
3 applicable to executives, these four measures  
4 are only in effect for the first three months of  
5 the rate year (April 1 - June 31, 2010) and  
6 reduce its rate request by \$1.7 million.

7 Q. Please continue.

8 A. The second category of cost saving measures are  
9 associated with corporate-wide initiatives and  
10 include restrictions on business travel,  
11 reductions in transportation and communications  
12 costs, suspension of some memberships in  
13 industry associations, reductions in consulting  
14 services, and reduction in vested vacation and  
15 employee health costs to be achieved by  
16 continued use of overtime work to delay some new  
17 hiring during the rate year. Except for the  
18 measures to reduce transportation and  
19 communication costs, which Con Edison states are  
20 permanent, the other corporate-wide measures are  
21 also only in effect for the first three months  
22 of the rate year and reduce the Company's rate  
23 request by \$2.8 million.

24 Q. What is the last category?

1 A. The final category of cost saving measures  
2 relate to reductions in the Company's 2009  
3 capital spending program. Con Edison indicates  
4 that this measure results in a reduction to its  
5 rate request of \$18.1 million, representing the  
6 carrying charges associated with a capital  
7 spending reduction of approximately \$139  
8 million.

9 Q. Does Con Edison plan to update its rate year  
10 austerity program?

11 A. In his pre-filed supplemental testimony, Company  
12 witness Rasmussen states that when Con Edison  
13 establishes its fiscal year 2010 capital and O&M  
14 budgets, additional rate year cost reductions  
15 may be identified. Accordingly, an update is  
16 possible.

17 Q. Do you have any concerns or comments regarding  
18 Con Edison's proposed austerity program for the  
19 rate year?

20 A. Yes. Attachment B of the Company's filing  
21 submitted on March 26, 2009, which identifies  
22 austerity measures the Company planned to  
23 implement in the rate year ending March 31,  
24 2010, include reductions to the Company's O&M

1 budget of \$19 million. In that filing, the  
2 Company describes those reductions as being  
3 "associated with multi-year and low-priority  
4 projects and programs, and relatively modest on  
5 an individual project or program basis."  
6 Witness Rasmussen's supplemental testimony does  
7 not address the continuation of each of those  
8 specific O&M austerity measures, except to state  
9 that additional rate year cost reductions may be  
10 identified when the Company completes its 2010  
11 O&M budgets.

12 Since the economy in Con Edison's service  
13 territory is showing little sign of improvement,  
14 we recommend that the Company's revenue  
15 requirement in this proceeding reflect the  
16 continuation of the category one (labor and  
17 labor-related) austerity measures, the category  
18 two (corporate-wide initiatives) austerity  
19 measures, and the O&M reductions identified in  
20 Attachment B of the Company's filing submitted  
21 on March 26, 2009, at least through the rate  
22 year and until the economy in the Company's  
23 service territory shows signs of improvement.

24 Q. How would you describe the present status of the

1 New York City (NYC) economy?

2 A. Prior national recessions, such as the recession  
3 that occurred during 1980-1982, pale in  
4 comparison with the present recession, which the  
5 National Bureau of Economic Research (NBER)  
6 declared began in December 2007. The basis for  
7 this conclusion can be found in Exhibit \_\_\_\_  
8 (SPP-2). Exhibit \_\_\_\_ (SPP-2) contains historical  
9 data of the Gross City Product of New York City  
10 (GCPNYC), as calculated by the City of New York,  
11 Office of Management and Budget (CNYOMB). This  
12 data shows the movement in the GCPNYC from 1979-  
13 2007 in both real (\$2000) and nominal terms. It  
14 provides the forecast of GCPNYC in real dollars  
15 for the years 2008-2011.

16 Q. Since 1979, what has been the trend for real  
17 GCPNYC?

18 A. Despite the national recessions that occurred  
19 between 1980 and 1982, the economy of NYC  
20 continued to experience growth in real GCPNYC of  
21 2.2% in 1980, 4.1% in 1981, and 2.0% 1982. The  
22 recession from July 1990 to March 1991 impacted  
23 the economy of NYC negatively, with a reduction  
24 in real GCPNYC of -2.7% in 1991. Growth in

1 GCPNYC subsequently turned positive and  
2 accelerated in the 1990s peaking in 2000 at  
3 8.9%. The recession of 2001, along with the  
4 infamous September 11, 2001 terrorist attack,  
5 caused two years of sizable decreases in real  
6 GCPNYC of -5.0% in 2001 and -3.7% in 2002.  
7 Growth in GCPNYC then resumed in 2003 and  
8 continued through 2007. The national recession  
9 that began in December 2007, however, has  
10 precipitated a decline in prospective GCPNYC  
11 that is not only unprecedented, but also  
12 continuing.

13 Q. Please explain.

14 A. The CNYOMB foresees decreases in real GCPNYC of  
15 -4.5% in 2008, -12.0% in 2009, and -1.9% in  
16 2010. These are truly staggering decreases in  
17 the economic activity of NYC that radiate well  
18 beyond the city limits and throughout the  
19 region, as well as New York State (NYS). The  
20 implications of this are generating budgetary  
21 challenges that are of tremendous magnitude.

22 Q. How is the present recession impacting NYC in  
23 comparison to the national economy?

24 A. Its impact on NYC is much more severe. The

1 August 2009 Blue Chip Economic Indicators states  
2 that real United States Gross Domestic Product  
3 (USGDP) increased by 0.4% in 2008. It predicts  
4 a decrease of -2.6% in 2009, and an increase of  
5 2.3% in 2010, which is substantially better than  
6 described above for NYC.

7 Q. Please summarize the recent history and forecast  
8 of unemployment rates in NYC?

9 A. Unemployment rates have recently increased  
10 significantly. For example, the NYC  
11 unemployment rate experienced the largest  
12 increase in a single month on record in March  
13 2009 to 8.1%, from 6.9% the previous month.  
14 That escalation in unemployment rates in NYC has  
15 continued, with the most recent unemployment  
16 rate at 9.5% for June 2009. The unemployment  
17 rate has almost doubled in 16 months. The  
18 CNYOMB projects that the average unemployment  
19 rate for 2010 in NYC will rise to 10.2%.

20 Q. What overarching economic uncertainties confront  
21 the national economy at this time?

22 A. With the Federal Funds rate close to 0%, the  
23 Federal Government is now primarily dependent on  
24 implementing fiscal policy to regenerate the

1 economy back into a growth mode. Fiscal policy  
2 is inherently a slower policy tool than monetary  
3 policy, which makes forecasts of economic  
4 activity, as we go forward, fraught with  
5 uncertainty. Rising bankruptcies, commercial  
6 real estate uncertainties, and lagging increases  
7 in wages and incomes all pose further  
8 challenges. Economists argue whether this  
9 recession will look like the traditional "V"  
10 shape, where the economy exits the recession  
11 without returning to subsequent negative growth,  
12 a "W" shape, where the economy exits the  
13 recession only to return back to negative growth  
14 again (also known as a double-dip), or the  
15 dreaded "L" shape, where the economy falls into  
16 recession, and then stays in negative growth for  
17 an extended period of time. Consumer  
18 confidence, as measured by the  
19 Reuters/University of Michigan preliminary index  
20 of consumer sentiment decreased to 63.2% in  
21 August 2009. The consensus forecast by  
22 economists as determined by Bloomberg had been  
23 69% for August 2009, with a range from 64% to  
24 75%. The fact that this preliminary actual fell

1 below the lowest forecast is a cautionary alarm  
2 regarding just how difficult it will be for the  
3 consumer to lead the U.S. economy out of this  
4 recession. The net effect of the confluence of  
5 these economic realities is that it may be a  
6 major challenge for the US economy to experience  
7 sustained economic growth over the next few  
8 years.

9 Q. What overarching economic uncertainties confront  
10 the NYC economy at this time?

11 A. The challenges that confront the US economy will  
12 continue to significantly impact NYC.

13 Furthermore, the continued status of NYC as a  
14 global financial powerhouse, and its relative  
15 profitability, could be challenged, which could  
16 significantly contribute to the future economic  
17 vitality of NYC, the State and the US. We are  
18 presently facing great uncertainty that suggests  
19 firms navigate cautiously and engage in cost  
20 savings where possible.

21 Q. Returning to your discussion of Con Edison's  
22 austerity program, what would be the rate impact  
23 of your recommendation to extend the category  
24 one and two austerity measures an additional

- 1 nine months (from June 30, 2010 to March 31,  
2 2011), as well as the O&M austerity reductions  
3 identified in Attachment B of the Company's  
4 March 26, 2009 filing, to the end of the rate  
5 year?
- 6 A. It would further reduce Con Edison's rate  
7 request by \$31.3 million.
- 8 Q. Are other Staff witnesses and Panels proposing  
9 austerity related adjustments?
- 10 A. Yes. The Staff Accounting Panel and Staff  
11 Witness Quackenbush, as discussed in their  
12 testimonies, are proposing austerity related  
13 adjustments of \$2.242 million and \$0.990  
14 million, respectively.
- 15 Q. Please summarize the total level of austerity  
16 measures reflected in Staff's revenue  
17 requirement recommendation for the rate year  
18 ending March 31, 2011.
- 19 A. Staff's revenue requirement reflects total rate  
20 year austerity related savings of \$57.132  
21 million. This amount is comprised of the \$22.6  
22 million that Con Edison has proposed to date,  
23 \$31.3 million attributable to continuing the  
24 austerity measures we are proposing, \$2.242

1 million in adjustments that the Staff Accounting  
2 Panel is proposing, and a \$0.990 million  
3 adjustment that Staff witness Quackenbush is  
4 proposing.

5 Q. Is the Company required to report on its efforts  
6 to achieve the austerity measures it has  
7 identified?

8 A. Yes. The 2009 Rate Order requires that the  
9 Company file reports on or about every 90 days  
10 concerning its progress in achieving all of the  
11 austerity cuts. In a letter confirmation  
12 submitted to the Commission's Secretary on  
13 August 27, 2009, the Company stated that it will  
14 file its first quarterly report by October 15,  
15 2009. Therefore, to the extent necessary, we  
16 reserve the right to update our testimony on the  
17 Company's austerity program at the time of the  
18 hearings, if our review of that report has any  
19 impact on our recommendations.

20 **Property Tax Panel Response**

21 Q. In its 2009 Rate Order, the Commission directed  
22 Con Edison to include in its next electric rate  
23 filing, or not later than 30 calendar days after  
24 that filing, testimony explaining how its real

1 property is defined and classified, the amount  
2 or value of its real property subject to  
3 taxation, the general uses of such real  
4 property, the history of the value of its  
5 property and tax rates over the last ten years,  
6 whether and to what extent its tax rates are  
7 consistent with those paid by other New York  
8 City and Westchester businesses. To the extent  
9 that there are inconsistencies in taxation, the  
10 Company was required to identify actions that  
11 have been and could be taken to address the  
12 situation, correct?

13 A. Yes.

14 Q. Did Con Edison submit testimony addressing these  
15 matters?

16 A. Yes. On June 8, 2009, the Company's Property  
17 Tax Panel (PTP) filed supplemental testimony in  
18 this proceeding addressing these matters.

19 Q. Do you have any concerns or comments regarding  
20 the supplemental testimony?

21 A. Yes. Our major concern is that within NYC, the  
22 Company's tax rates are established by a  
23 structure in which Con Edison, and therefore its  
24 customers, are required to bear a

1 disproportionately large share of the overall  
2 property tax burden.

3 Q. In its supplemental testimony, did Con Edison's  
4 PTP explain how the Company's real property in  
5 NYC is defined and classified?

6 A. Yes. The Panel explains that, each year, the  
7 Mayor submits an executive budget for the  
8 upcoming fiscal year (July 1 to June 30) to the  
9 City Council (Council). After the Council  
10 adopts a budget, it fixes the annual property  
11 tax rates and authorizes the levy of real  
12 property taxes for the fiscal year (FY).

13 To determine the amount of the real  
14 property tax levy, the Council first determines  
15 the amount of the projected FY year spending and  
16 an estimate of FY non-property tax revenues.  
17 The Council then determines the amount to be  
18 raised by taxes on real property by subtracting  
19 the amount of projected FY non-property revenue  
20 from the amount of projected FY spending. The  
21 PTP states that "the property tax is unique in  
22 that it is the only tax over which the City has  
23 discretion to determine the rate without  
24 legislation from the State and therefore,

1 property taxes may be used to balance the  
2 budget."

3 To ensure that the level of property tax  
4 revenue needed to balance the budget is  
5 achieved, the City makes allowances for a number  
6 of items including uncollectible property taxes,  
7 refunds and tax collections from prior years,  
8 together known as the property tax reserve. The  
9 real property tax levy is equal to the property  
10 tax revenue plus the property tax reserve.

11 After having determined the amount of the  
12 real property tax levy, the Council authorizes  
13 and fixes the real property tax rates. Three  
14 things determine the amount of tax applicable to  
15 property in NYC: the market appraisal for the  
16 property itself; the fraction of the assessed  
17 value on which taxes are to be paid; and, the  
18 tax rate for the property class.

19 Q. Please explain the classes of property in the  
20 City.

21 A. Counsel advises that the "class" system for  
22 property taxation in the City was established in  
23 the Real Property Tax Law. There are four  
24 classes of property in the City and

1           consequently, four different tax rates. Class 1  
2           is comprised primarily of one, two and three-  
3           family homes. Class 2 consists of all other  
4           residential property not in Class 1. Class 3 is  
5           comprised of utility real property owned by  
6           utility corporations, but excludes land and  
7           buildings. Class 4 contains all other real  
8           property. The PTP indicates that about 90% of  
9           the Company's property falls within Class 3 and  
10          the remainder within Class 4. Each class is  
11          responsible for a specific share of the property  
12          tax levy, known as the class share.

13                 Class shares are determined each year  
14          according to a statutory formula. The PTP notes  
15          that the percentages of the tax levy represented  
16          by the class share that were in place in 1989  
17          are known as the base proportions. Each year  
18          these base proportions are adjusted according to  
19          changes in market value determined by the New  
20          York State Office of Real Property Services  
21          (ORPS). The adjusted proportions become the  
22          current base proportions. The PTP indicates  
23          that this process was designed to ensure that  
24          each of the four classes pay roughly the same

1 percentage share of the total property tax levy  
2 as they did in 1989. The base proportions are  
3 adjusted to reflect physical and other non-  
4 market changes that are reflected on the current  
5 assessment roll. The class share is measured by  
6 multiplying the total levy by the adjusted base  
7 proportion in each class. From that process,  
8 the tax rates for each class can be determined  
9 by dividing the class share by the total  
10 assessed value of the respective class.

11 Q. Are there any limitations on the tax levy and/or  
12 class shares?

13 A. Yes. According to the Company's PTP there are  
14 two limitations on the levy and/or class shares,  
15 a State constitutional operating limit provision  
16 and a 5% cap.

17 The operating limit condition, by and  
18 large, provides that the City is not permitted  
19 to levy taxes on real property in any fiscal  
20 year in excess of an amount equal to a combined  
21 total of 2.5% of the average full assessment of  
22 taxable real property for the current year and  
23 the prior four years. The Company notes that  
24 for NYC fiscal year 2008/09, the limitation was

1           \$17.5 billion and the actual property tax levy  
2           falls below it.

3           The PTP states that the second condition,  
4           the rate cap, prevents the current base  
5           proportion of a class from being increased by  
6           more than the cap in any one year. The PTP  
7           maintains that this limitation has had a  
8           significant impact in the determination of the  
9           Class 3 and 4 tax rates over the years.

10          The PTP stresses that although the statute  
11          limits the growth of the current base proportion  
12          for any class share up to the cap annually, the  
13          City may seek State legislation to lower the  
14          legislative cap on the allowable growth of the  
15          current base proportion used to measure the  
16          adjusted base proportion of each of the four  
17          classes. The PTP notes that if the uncapped  
18          growth exceeds the statutory cap, the excess  
19          must be distributed among the other classes. If  
20          the legislative cap is reduced to less than the  
21          5% statutory cap, then a greater excess must be  
22          shifted among the other classes. The PTP points  
23          out that since NYC's 2001/02 FY, the City has  
24          shifted the excess to Classes 3 and 4. The PTP

1 states that the Company opposes this piece of  
2 legislation and lobbies the City in an attempt  
3 to mitigate the shift of the 5% overage to Class  
4 3 taxpayers.

5 Q. What is the relationship between market value  
6 and the tax levy for each class?

7 A. In its supplemental testimony, the PTP  
8 illustrates the relationship between market  
9 value and the tax levy for each class based on  
10 FY 2007/08 information. This exercise clearly  
11 shows the discrepancy between the classes.  
12 Class 1 accounts for 54% of the city-wide market  
13 value but is only responsible for 15% of the  
14 property tax burden. The other classes pay  
15 disproportionately higher taxes since their  
16 shares of the tax burden are higher than their  
17 share of market value. In other words, since  
18 Class 1 pays only 15% of the tax levy, the  
19 residual 39% of its share gets passed through to  
20 the other classes, which together make up only  
21 46% of the total market value. Thus, Classes 2,  
22 3 and 4 shoulder a disproportionately large  
23 share of the overall property tax burden. Taxes  
24 in Class 3 are the highest relative to market

- 1 value. Class 3 taxpayers account for just 2% of  
2 the market value, but are responsible for 7% of  
3 the tax levy.
- 4 Q. Did the PTP provide data showing the history of  
5 its electric property taxes in NYC over the last  
6 ten years as required by the 2009 Rate Order?
- 7 A. Yes. The Company submitted data showing that  
8 property taxes paid to the City rose from \$411.2  
9 million in FY 2000/01 to \$945.9 million in FY  
10 2009/20, or roughly 130% during that period. In  
11 contrast, increases in assessed and market  
12 values over that same period were smaller.
- 13 Q. Did the PTP explain the efforts Con Edison is  
14 making, or has made, in challenging the City's  
15 property tax class system?
- 16 A. Yes. The PTP discusses the Company's current  
17 efforts seeking to merge Class 3 with Class 4  
18 which it contends would greatly benefit its  
19 customers. According to the PTP, the immediate  
20 benefit would be the end of the higher Class 3  
21 tax rate, partially offset by an increase in the  
22 Class 4 tax rate. Based on current rates, the  
23 PTP estimates annual savings of roughly \$120  
24 million if Classes 3 and 4 merge.

1           The PTP also identifies other benefits of  
2           merging these two classes. Con Edison comprises  
3           approximately 77% of Class 3, so any cap  
4           legislation pursued by the City to shift the  
5           property tax burden away from homeowners has a  
6           significant impact on the Company. Merging  
7           Classes 3 and 4 would reduce this effect since  
8           the Company's property would be a smaller  
9           percentage of a larger class. Further, to the  
10          extent that the City increases the class tax  
11          rate to offset a reduction in assessments, Con  
12          Edison would realize a greater proportion of the  
13          reduced assessments it obtains, since it will  
14          pick up a smaller percentage of any increase in  
15          taxes aimed at offsetting the reduced  
16          assessments.

17          The PTP also explains that a transition  
18          assessment currently available to Class 4, but  
19          not Class 3 taxpayers, would be available to Con  
20          Edison, should Classes 3 and 4 be merged. A  
21          transition assessment phases in, over a five-  
22          year period, large assessment increases and the  
23          phase out of large assessment decreases caused  
24          by reasons other than physical plant increases.

1           The PTP indicates that large increases in the  
2           Company's recent assessments could have been  
3           mitigated via the five-year phase-in if the  
4           transition assessment had been available to  
5           Class 3 taxpayers.

6    Q.    Did the PTP also explain the Company's prior  
7           efforts to change the class system of taxation  
8           in NYC?

9    A.    Yes.  The PTP refers to the Company's prior  
10           efforts as broad-based.  The Panel claims that  
11           the Company contested the assessed values of  
12           specific properties, the availability of certain  
13           tax reduction benefits and credits and the  
14           legality of various City legislative actions.  
15           In addition, in its response to Staff IR DPS-  
16           222, included in Exhibit\_\_\_(SPP-1), the Company  
17           identifies a few times in which it met with  
18           representatives from the City in which the Class  
19           system was discussed prior to its current  
20           efforts, which it claims is a concentrated  
21           effort.

22   Q.    Why is the Company making a concentrated effort  
23           now to challenge the City's class system?

24   A.    In its supplemental testimony, the PTP stated

1           that "in 2008, it became increasingly apparent  
2           that the implementation of the class system in  
3           conjunction with allocation of the excess above  
4           the cap was unduly and unreasonably adverse to  
5           Class 3 property holders."

6    Q.    Is the City supportive of the Company's current  
7           efforts to merge Classes 3 and 4?

8    A.    The PTP indicates that the City is not  
9           supporting the efforts at this time.  It notes,  
10           however, that the City may consider overall real  
11           property tax law reform next year.  The PTP also  
12           states that the Company is "proceeding to seek  
13           introduction of our proposed change in the  
14           current legislation session."  It should be  
15           noted that, while the state legislature has  
16           reclassified property in the City before, there  
17           has not been a case where an entire class was  
18           eliminated.

19   Q.    Has the Company pursued any legal challenges  
20           within the last ten years regarding the class  
21           system?

22   A.    No it has not.  In its testimony, the PTP states  
23           "we have been advised by counsel that the  
24           classification system has been challenged in the

1 past and upheld." The Panel indicates that in  
2 that case, the plaintiff argued in vain that the  
3 class system was unconstitutional.

4 Q. Has Con Edison, or any entity on its behalf,  
5 prepared any legal analysis of the litigation  
6 risks and the costs and benefits of pursuing  
7 legal challenges to the City class system?

8 A. In its response to Staff IR DPS-222.9R included  
9 in Exhibit\_\_\_(SPP-1), the Company maintains that  
10 in December 2008, a legal analysis was performed  
11 on the Company's behalf by outside counsel  
12 regarding a challenge to the class system and is  
13 currently under consideration. The Company  
14 further states that "[a]ccordingly, the  
15 Company's analysis is not complete." It should  
16 be noted that the Company claimed in its  
17 response that the legal analysis conducted is  
18 subject to attorney/client privilege and,  
19 accordingly, did not provide a copy of the  
20 analysis.

21 Q. Has the Company used outside counsel or  
22 consultants to pursue property tax claims or  
23 challenges in NYC or other taxing jurisdictions?

24 A. In its response to Staff IR DPS-445 included in

1 Exhibit\_\_\_ (SPP-1), the Company indicates that it  
2 used outside counsel to pursue tax claims and  
3 challenges in NYC, Westchester and Upstate  
4 counties over the past seven years.

5 Q. Does the Panel have final comments and  
6 recommendations?

7 A. Yes. First, we support Con Edison's current  
8 efforts to work with NYC to control or reduce  
9 the amount of NYC property taxes shouldered by  
10 the Company's customers and strongly encourage  
11 the Company to continue to work with the City to  
12 pursue property tax restructuring that will  
13 benefit its customers. Continual large  
14 increases in property taxes not only cause  
15 significant customer bill impacts, but also may  
16 discourage Commission authorization of funding  
17 for other initiatives that may benefit  
18 ratepayers in the long-term, such as energy  
19 efficiency, since such programs may also place  
20 untenable upward pressure on rates.

21 Second, although we recognize the past  
22 actions taken by the Company to control property  
23 taxes, we recommend that the Company be required  
24 to submit in each rate filing, testimony

1           regarding the actions it has taken to control,  
2           or reduce, property taxes. Among other things,  
3           the filings should include: a summary of actions  
4           taken to challenge tax rates and/or assessments;  
5           information regarding its use of outside  
6           consultants and counsel to pursue tax claims or  
7           challenges; the extent to which outside counsel  
8           are employed on a contingency fee basis; and,  
9           its requests for available tax credits. In the  
10          absence of such a demonstration, the Company  
11          should be subject to a five basis point negative  
12          rate adjustment.

13                 Finally, since property taxes are one of  
14          Con Edison's most significant expenses and  
15          because of the extraordinary upward pressure on  
16          delivery rates, we recommend that the Commission  
17          establish an aggressive incentive mechanism to  
18          encourage the Company to minimize these costs.  
19          The Commission should consider an incentive  
20          mechanism that will allow the Company to retain  
21          a greater share of any property tax savings it  
22          realizes as a result of its efforts. The  
23          Commission has in the past awarded utilities  
24          from 10% to 25% of refunds received as a result

1 of successful property tax challenges, the  
2 higher percentages being based on extraordinary  
3 effort involved, the magnitude of the refund, a  
4 novel legal theory that produced the refund, the  
5 minimization of litigation costs, the potential  
6 for long-term benefits resulting from the  
7 successful challenge, and the potential for the  
8 successful challenge or basis for challenge to  
9 produce benefits for other utilities. Should  
10 Con Edison achieve substantial and ongoing  
11 property tax cost savings attributable to its  
12 efforts, as just discussed, related to  
13 correcting substantial over assessments to its  
14 Class 3 properties, the Commission should  
15 consider providing the Company with an award at  
16 or above the upper threshold of typical awards  
17 and/or consider whether such award should be  
18 allowed for a multi-year period.

19 **Company's Proposal for a Three-Year Rate Plan**

20 Q. Did Con Edison propose a three-year rate plan as  
21 an alternative to its one-year case?

22 A. Yes.

23 Q. Please briefly explain Con Edison's three-year  
24 rate plan proposal.

1 A. The Company proposes that rates established for  
2 the rate year ending March 31, 2011, become the  
3 base from which projections are made in order to  
4 set rates for the following two rate years. The  
5 Company also proposes that filings on capital  
6 expenditures in future years be made prior to  
7 the start of subsequent rate years to allow for  
8 review and, if necessary, Commission action.

9 Q. What are the projected increases in revenue  
10 requirement under the Company's three-year rate  
11 year plan?

12 A. Based on its preliminary update filing, the  
13 projected revenue requirement increases in Rate  
14 Year 1, Rate Year 2 and Rate Year 3 are \$928.9  
15 million \$375.1 million and \$381.2 million,  
16 respectively. In projecting these increases,  
17 the Company factored in a stay-out premium of 71  
18 basis points to increase the return on equity  
19 from 10.9% to 11.6%. As an alternative to the  
20 three annual increases, the Company proposed  
21 levelized annual increases of \$656.5 million, or  
22 14.4% annually.

23 Q. What is driving the Company's projected  
24 increases in revenue requirement?

1 A. The primary causes of the Company's rate  
2 increase in Rate Year 1 are attributable to  
3 carrying costs on capital additions, property  
4 tax expense, pension & Other Post Employment  
5 Benefits (OPEB) costs and cost of capital. The  
6 major drivers of proposed rate increases in Rate  
7 Year 2 and Rate Year 3 are carrying costs on  
8 capital additions, property tax expense, and  
9 pension & OPEB costs. In fact, these three  
10 items account for approximately 88% (\$332  
11 million) and 83% (\$315 million) of the Company's  
12 projected rate needs for Rate Year 2 and Rate  
13 Year 3.

14 Q. Does the Company's proposal include a request  
15 for various reconciliation, or true-up,  
16 mechanisms?

17 A. Yes. The Company's rate plan proposal includes  
18 the same reconciliation mechanisms currently  
19 provided for by the Commission. Specifically,  
20 true-ups would be provided for sales variances  
21 through continuation of the Revenue Decoupling  
22 Mechanism (RDM), energy efficiency program  
23 costs, pension & OPEB expense, property taxes,  
24 site investigation & remediation (SIR) program

1 costs, World Trade Center (WTC) costs and  
2 recoveries, and certain interest costs. The  
3 Company would also continue reserve accounting  
4 for Category 2 and 3 Storm and East River  
5 Repowering project (ERRP) costs. In addition,  
6 the Company requests a mechanism that would  
7 allow it to defer costs should the economy  
8 experience unexpectedly high levels of inflation  
9 during the term of the rate plan. Moreover, the  
10 Company proposes to true-up and defer costs  
11 associated with new legislative and regulatory  
12 requirements. Finally, the Company proposes  
13 bilateral reconciliation of interference O&M  
14 expenses.

15 Q. As part of its multi-year rate proposal, did the  
16 Company recommend an excess earnings sharing  
17 mechanism?

18 A. No it did not.

19 Q. What comments or concerns do you have concerning  
20 the Company's proposed three-year rate plan?

21 A. During the period encompassed by its proposed  
22 three-year rate plan, the Company's electric  
23 delivery revenues would increase by over \$3.9  
24 billion. This would come on top of three

1 consecutive annual delivery rate increases of  
2 \$220 million (7.3% on delivery), \$425 million  
3 (12.4% on delivery) and \$523 million (14.1% on  
4 delivery) in 2007, 2008 and 2009, respectively.  
5 Cumulatively, delivery rates have increased  
6 approximately 40% over the past three years, and  
7 the Company has collected an additional \$2  
8 billion over that period. If the Company's rate  
9 increase proposal is approved without  
10 modification, Con Edison's delivery rates would  
11 increase approximately 83% over a six-year  
12 period.

13 Base rate increases of the magnitude  
14 proposed by the Company would be unreasonable  
15 because of concerns regarding the ability of  
16 most customers to bear such increases in rates.  
17 In addition, the Company's proposal does not  
18 contain a plan or strategy to control or reduce  
19 the upward pressure on delivery rates caused by  
20 its ongoing capital spending program, increasing  
21 property taxes, and increasing pension and OPEB  
22 costs. As noted previously, it is primarily  
23 these three items that drive the Company's  
24 revenue needs and its proposal fails to explain

1           what actions, if any, it would take during the  
2           term of rate plan to manage these cost drivers.

3           Moreover, the Company's proposal does not  
4           include a plan to control or reduce its other  
5           operating costs including labor. The Company's  
6           proposal simply escalates the forecasted base  
7           rate year rate allowances by inflation. No cost  
8           control of any kind is discussed in the  
9           Company's proposal.

10           Finally, Con Edison's proposal does not  
11           consider other Company specific proceedings such  
12           as Case 07-E-0523, Capital Expenditure Deferral  
13           Review, Case 09-M-0114, Capital Expenditures  
14           Investigation and Case 08-M-0152, Con Edison  
15           Management Audit, which may have an impact its  
16           operations and rates during the term of the rate  
17           plan. Proposing to set rates for a three-year  
18           period without due consideration of these  
19           proceedings seems imprudent. Consequently, for  
20           all the above reasons the Commission should  
21           reject the Company's rate-plan proposal to lock  
22           in over \$3.9 billion in additional delivery  
23           revenues over its three-year term.

24           Staff's Proposal for a Three-Year Rate Plan

1 Q. Did you explore the possibility of a multi-year  
2 rate plan for Con Edison as part of your  
3 examination of the Company's rate filing?

4 A. Yes.

5 Q. Are you proposing a multi-year rate plan as an  
6 alternative to Staff's one-year case?

7 A. Yes. As an alternative to Staff's one-year  
8 case, we are proposing a three-year rate plan  
9 for Con Edison.

10 Q. Would you please explain your proposal?

11 A. There were four primary causes of Con Edison's  
12 increase in base rates in its last electric rate  
13 case (Case 08-E-0539): carrying costs on capital  
14 additions; property taxes; pension & OPEBs  
15 costs; and, cost of capital. These are also the  
16 four major drivers of the Company's proposed  
17 rate increases in this proceeding.

18 Specifically, of the Company's rate request of  
19 \$840 million (which excludes the 70 basis points  
20 stay-out premium) for the rate year ending March  
21 31, 2011, about \$540 million, or roughly 65%, is  
22 related to these four items. Furthermore, Con  
23 Edison's electric revenue requirement  
24 projections (Exhibit \_\_\_ (ERJ-1), July 10

1 Update), show that increases in carrying costs  
2 on capital additions, increases in property  
3 taxes and increases in pension & OPEB expense  
4 account for approximately 88% (\$332 million),  
5 83% (\$315 million), 83% (\$226 million) and 79%  
6 (\$307 million) of the Company's projected rate  
7 needs for the rate years ending March 31, 2012,  
8 2013, 2014 and 2015, respectively.

9 With this backdrop, we are proposing that  
10 the rates established for the rate year ending  
11 March 31, 2011, become the base from which the  
12 Commission provides for staged increases for the  
13 two subsequent rate years, limited to only three  
14 items: carrying costs on capital additions;  
15 property tax expense; and, pension & OPEB  
16 expense. There is little or no need for  
17 repeated annual rate case filings in the next  
18 two years involving the same cost drivers.  
19 Moreover, we are concerned that the public  
20 interest may not be served if Con Edison  
21 continues to file annual rate cases that  
22 primarily raise these same issues and cost  
23 drivers.  
24 Q. Please continue.

1 A. The Staff Accounting Panel notes that Staff is  
2 recommending a base rate increase of \$477.360  
3 million for the rate year ending March 31, 2011.  
4 There is no stay-out premium in the one-year  
5 case. With a three-year rate plan, as discussed  
6 by the Staff Finance Panel, there would be a  
7 stay-out premium of 12 basis points to increase  
8 the recommended return on equity (ROE) from  
9 10.1% to 10.22%. Accordingly, if a multi-year  
10 plan was adopted, the ROE increase would result  
11 in a Staff revenue requirement of \$492.017  
12 million for the rate year ending March 31, 2011.  
13 The increases in revenue requirement for the  
14 rate year ended March 31, 2012 and the rate year  
15 March 31, 2013 would be determined in fully  
16 supported staged filings that Con Edison would  
17 make related to capital additions, property tax  
18 expense and pension & OPEB expense.

19 Since the recommended delivery revenue  
20 increase is so significant in the first rate  
21 year, and the economy in the Company's service  
22 territory is expected to continue to be  
23 relatively weak, we recommend that the  
24 Commission, if it were to adopt our multi-year

1           proposal, consider authorizing the Company to  
2           recover a portion of the rate year revenue  
3           requirement increase in Rate Years 2 and 3.  
4           This would tend to levelize the increases in  
5           each of the three years considering that Con  
6           Edison's current projections indicate that the  
7           three categories for which staged increases  
8           would be permitted would result in rate  
9           increases in the range of \$300 million in Rate  
10          Years 2 and 3. In such event, the Company would  
11          be entitled carrying charges on any accrued  
12          revenue at the Company's pre-tax rate of return.

13    Q.    What information would be included in the staged  
14          filings?

15    A.    Con Edison would, among other things, submit its  
16          capital spending plan and the associated revenue  
17          requirement impact. The Company's capital  
18          spending plan should, among other things,  
19          reflect its implementation of the  
20          recommendations contained in the recent  
21          management audit report concerning its  
22          construction planning process. This should  
23          include the recognition of the resulting rate  
24          and bill impacts and the sustainability of the

1 Company's capital spending plans given the  
2 current state of the economy and the benefits  
3 that those plans are expected to provide. Con  
4 Edison's spending plan would also incorporate  
5 any Commission directives made in this case, or  
6 any other case, as they concern the Company's  
7 current and future construction activities.

8 In order to limit the potential rate  
9 impacts of increased infrastructure  
10 expenditures, the Commission should set a cap on  
11 the level of annual infrastructure expenditures  
12 for Rate Year 2 and Rate Year 3, equal to the  
13 level adopted for the first rate year. For  
14 example, if the Commission adopts the Staff  
15 Infrastructure Panel's proposed T&D capital  
16 expenditure forecast for Rate Year 1 of  
17 approximately \$1 billion, the subsequent Rate  
18 Year 2 and Rate Year 3 spending in this category  
19 should be no more than that level. In addition,  
20 the existing downward reconciliation of carrying  
21 charges on capital expenditures in the  
22 categories of Transmission and Distribution,  
23 Shared Services, Production and Municipal  
24 Infrastructure should continue for all three

1 rate years.

2 The staged filings would also include Con  
3 Edison's forecast of property tax expense based  
4 on latest known available information. As noted  
5 above, the Company would be required to  
6 demonstrate that it has taken actions to control  
7 or reduce its property taxes.

8 Con Edison would also present its forecast  
9 of pension and OPEB costs based on latest known  
10 actuarial information. Furthermore, under our  
11 proposal the Company would be required to  
12 continue to demonstrate that it has taken action  
13 to control or reduce its pension and OPEB  
14 benefit plan costs.

15 The annual staged filings would include  
16 forecasted sales using the sales forecasting  
17 methodology that the Commission adopts for Rate  
18 Year 1. Based on the updated sales forecast and  
19 the resulting revenue requirement ultimately  
20 approved for Rate Years 2 and 3, the Company  
21 would file updated RDM targets for each year.  
22 The RDM mechanism currently in place should  
23 remain in effect and be used for all three  
24 years.

1 Under our proposal, the staged filing would  
2 include a status report on all of the Company's  
3 other on-going relevant proceedings (i.e., Case  
4 07-E-0523, Capital Expenditure Deferral Review  
5 and Case 09-M-0114, Capital Expenditures  
6 Investigation.

7 Q. Please explain your proposal regarding the  
8 remaining portion of Con Edison's revenue  
9 requirement.

10 A. As noted above, approximately 88% (\$332 million)  
11 and 83% (\$315 million) of the Company's  
12 projected rate needs for Rate Year 2 and Rate  
13 Year 3 are driven by three items for which  
14 staged filings would be permitted under our  
15 proposal. The Company would be required to  
16 manage the remaining difference in its projected  
17 revenue requirement without incremental rate  
18 relief.

19 Q. Does Con Edison have opportunities to manage  
20 that difference during the term of the rate  
21 plan?

22 A. Yes. For the last several years, Con Edison has  
23 experienced high attrition levels as its  
24 workforce ages and new employees opt not to

1 remain with the Company. Between January 2004  
2 and December 2008, the Company hired  
3 approximately 4,700 new utility employees as a  
4 result of this attrition.

5 In its response to Staff IR DPS-56,  
6 included in Exhibit\_\_\_ (SPP-1), Con Edison  
7 projects attrition of 700 employees in 2009, and  
8 states that it expects that attrition will  
9 increase beyond that level once the economy  
10 begins to improve. The Company also notes that  
11 it did not adjust its rate request for attrition  
12 because it generally needs to refill positions  
13 vacated through attrition.

14 Over that same time period, Con Edison has  
15 also been hiring new employees primarily to  
16 assist with its response to various emergencies  
17 and incidents, safety and upgrade programs, and  
18 other short-to medium term programs.  
19 Specifically, over the last five years (January  
20 2004 through December 2008), the Company has  
21 hired approximately 1,650 new utility employees  
22 for its expanding programs. This new hiring  
23 equates to an approximate 13% increase of the  
24 Company's workforce. It should be noted that

1 when asked to explain the productivity gains  
2 realized as a result this increased hiring, the  
3 Company, in its response to Staff IR DPS-291,  
4 included in Exhibit\_\_\_(SPP-1), merely stated  
5 that adding employees does not in and of itself  
6 result in productivity savings.

7 Q. Please continue.

8 A. The recently released management audit report,  
9 among other things, notes that Con Edison  
10 typically operates in a reactive mode, and that  
11 external events, particularly incidents and  
12 accidents, are the primary drivers of its  
13 activities and that the Company lacks sufficient  
14 clarity in its long-term vision. As a result,  
15 the report recommends that Con Edison develop a  
16 comprehensive vision for its electric business.

17 As Con Edison engages in the process of a  
18 developing a successful comprehensive vision for  
19 the future, it may consider that its existing  
20 workforce is sufficient or excessive in number  
21 to address its needs and, as a result, it may  
22 not fill all positions vacated through  
23 attrition. This would yield considerable labor  
24 and labor-related cost savings during the three-

1 year term of the rate plan and beyond.

2 In fact, based on recent data, it appears  
3 that the Company may be already putting this  
4 theory into practice. In its response to Staff  
5 IR DPS-14 Revised 2, included in Exhibit\_\_\_ (SPP-  
6 1), the Company shows employee headcount  
7 reductions in both June and July of 2009.

8 Q. Do other opportunities exist for the Company to  
9 manage the difference between its projected  
10 revenue requirements in Rate Year 2 and Rate  
11 Year 3 and the revenues allowed in Staff's  
12 proposed rate plan?

13 A. Yes. The Company forecasts an increase, albeit  
14 modest, in non-sales revenues in Rate Years 2  
15 and 3. Such increased revenue, which is not  
16 subject to the RDM, is a source to offset  
17 possible cost increases in those rate years.  
18 The Company projects increases in miscellaneous  
19 service revenues, mandatory hourly pricing  
20 program revenues as well as other operating  
21 revenues. It's even possible that the Company's  
22 non-sales revenues will be even greater than it  
23 currently projects.

24 Additionally, the Company requests expense

1 allowances for various short-term O&M programs  
2 in Rate Year 1. It does not, however, reflect  
3 the reduction in expense as the costs associated  
4 with these program changes decrease in Rate Year  
5 2 and Rate Year 3.

6 Q. Will Con Edison be allowed to reconcile, or  
7 true-up, any of its costs under your multi-year  
8 rate plan?

9 A. Yes. Our proposed rate plan provides for the  
10 reconciliation of sales variances through  
11 continuation of the RDM, energy efficiency  
12 program costs, pension & OPEB expense, site  
13 investigation & remediation (SIR) program costs,  
14 WTC costs and recoveries, and certain interest  
15 costs. Also, the downward-only reconciliation  
16 for infrastructure capital expenditures would  
17 continue as described earlier. The Company  
18 would also continue reserve accounting for  
19 Category 2 and 3 Storm and ERRP costs. Further,  
20 Con Edison would continue to reconcile revenues  
21 related to SO2 allowance credits, transmission  
22 service charges (TSC) and transmission  
23 congestion credits.

24 It should be noted, that our plan would not

1 allow for deferred accounting for the costs  
2 discussed above if the Company is earning in  
3 excess of the allowed return on equity  
4 established by the Commission.

5 Q. What about the cost of any regulatory,  
6 legislative or accounting change or any other  
7 new deferral item?

8 A. We propose to reconcile and defer, during the  
9 three-year rate plan, the entire costs of any  
10 regulatory, legislative or accounting change or  
11 any new deferral item whose impact exceeds 5% of  
12 the Company's actual utility net income.  
13 However, the Company can only defer the costs to  
14 the extent that its earnings do not exceed the  
15 Commission allowed return on equity. Cost  
16 savings associated with any regulatory,  
17 legislative or accounting change or any new  
18 deferral would not be subject to an earnings  
19 test and they would be captured entirely for  
20 customers.

21 Q. How are existing regulatory deferrals amortized  
22 within your rate plan proposal?

23 A. The regulatory deferrals subject to amortization  
24 are being reflected over the three-year rate

1 plan.

2 Q. What are you proposing as the balance of  
3 regulatory deferrals increases or decreases  
4 during the rate plan period?

5 A. We propose that unless the cumulative deferral  
6 balance reaches \$50 million, the Company should  
7 continue to defer the amounts until the end of  
8 the rate plan. If the balance exceeds that  
9 amount, Con Edison could request to recover from  
10 ratepayers or refund to ratepayers, as  
11 appropriate, the balance or a portion thereof,  
12 as part of its staged filing.

13 Q. How should your recommendations regarding the  
14 Company's austerity measures be reflected in  
15 your three-year plan proposal?

16 A. The reductions in capital expenditures would be  
17 shifted out in time so that the Company's annual  
18 capital budgets for the second and third rate  
19 years will not increase as a result of its  
20 reduction in capital expenditures. Therefore,  
21 the \$18.1 million revenue requirement reduction  
22 associated with the Company's reduction of 2009  
23 capital spending will carry beyond the first  
24 rate year, as will \$0.4 million associated with

1 the permanent transportation and communication  
2 cost reductions.

3 With respect to Staff's imputation of an  
4 additional \$34.532 million in the rate year, we  
5 propose that it continue until the Company makes  
6 a showing in one of its staged filings that the  
7 economic conditions in its service territory  
8 have improved.

9 Q. Does Staff's rate plan include a provision for  
10 excess earnings?

11 A. Yes. Our rate plan includes an earnings sharing  
12 mechanism because we believe that this virtually  
13 universal feature of multi-year rate plans, is  
14 critical element. We believe that our earnings  
15 sharing mechanism will provide the Company with  
16 a strong incentive to minimize its costs and  
17 gain efficiencies.

18 Q. Please explain the design of your earnings  
19 sharing mechanism.

20 A. Given the Staff Finance Panel's recommended ROE  
21 and its stayout premium determination of 0.12%,  
22 we recommend an earnings sharing threshold of  
23 10.9% over the duration of the rate plan.  
24 Further, on an annual basis the Company should

1 be directed to report its achieved earnings and  
2 defer all earnings in excess of that rate.  
3 Under our proposal, at the end of the three year  
4 rate plan, earnings between 10.9% and 11.9% will  
5 be shared equally between the Company and  
6 customers, while customers will receive 65% of  
7 earnings in excess of 11.9% and up to 12.9%.  
8 For earnings above the 12.9% level, customers  
9 will receive 90% of any excess.

10 Q. What is the basis for the sharing mechanism  
11 structure you recommend?

12 A. We believe that our structure is appropriate  
13 because it reflects an allocation of benefits  
14 and risk that is largely consistent with such  
15 provisions that the Commission has found to be  
16 reasonable in recently-adopted joint proposals.

17 Q. What incentives are included in your multi-year  
18 proposal?

19 A. We recommend that the reliability performance  
20 incentive mechanism proposed by Staff witness  
21 Jones, and the customer service performance  
22 incentive mechanism proposed by Staff witness  
23 Insogna, continue for the duration of the three  
24 year rate and until modified by the Commission.

1           In addition, as noted above, we propose that the  
2           Commission consider establishing a new incentive  
3           to minimize property taxes.

4    Q.    When would the Company make its staged increase  
5           filings?

6    A.    Con Edison should be directed to submit a fully  
7           supported filing, no later than June 1, 2010  
8           for the rate year beginning April 2011 and no  
9           later than June 1, 2011 for the rate year  
10          beginning April 2012. We believe that this will  
11          provide sufficient time for Staff and other  
12          interested parties to examine the Company's  
13          filing and report on it to the Commission for  
14          its consideration and eventual disposition.

15   Q.    What do you propose in the event Con Edison  
16          files for new rates during the term of rate  
17          plan?

18   A.    If Con Ed files for a rate increase to become  
19          effective before April 1, 2013, it should be  
20          required to return the stayout premium of 12  
21          basis points to ratepayers starting from April  
22          1, 2010 to the date of new rates.

23   Management Audit

24   Q.    Are the impacts of the recently completed

- 1 comprehensive management audit in Case 08-M-0152  
2 reflected in Staff's revenue requirement  
3 recommendation for the rate year ending March  
4 31, 2011 or its multi-year rate proposal?
- 5 A. No.
- 6 Q. Please comment on the procedures typically used  
7 by the Commission to incorporate the results of  
8 management audits in its rate decisions and what  
9 should be done in this proceeding.
- 10 A. The specific circumstances of this case indicate  
11 that procedures, in addition to those specified  
12 in the Public Service Law, may be appropriate to  
13 incorporate the results of the management audit  
14 into the Commission's rate order in this case,  
15 particularly if the Commission's decision  
16 results in a multi-year rate plan. As we have  
17 explained in detail, Con Edison's rates have  
18 increased substantially in recent years, the  
19 economy continues to be relatively weak, and Con  
20 Edison's customers are having difficulty paying  
21 their utility bills. In these circumstances,  
22 the Commission should consider all reasonable  
23 means to obviate upward pressure on Con Edison's  
24 rates. The recommendations resulting from this

1 management audit are one such tool. As stated  
2 by the Commission in its August 21, 2009 Order,  
3 "If Con Edison can deliver on the  
4 recommendations in the Final Report, it bodes  
5 well not only for the corporation's future  
6 success, but also for customers in terms of  
7 better service and cost savings that help  
8 mitigate rate increases."

9 However, under the procedure typically used  
10 by the Commission to consider the results of  
11 management audits in rate proceedings, any  
12 resulting cost savings would not be considered  
13 until Con Edison's next rate case, in which new  
14 rates would be established effective no sooner  
15 than April 1, 2011. Further, if the Commission  
16 approves a multi-year rate plan in this  
17 proceeding, the results of the management audit  
18 may not be incorporated into rates for several  
19 years.

20 In these circumstances, we recommend that  
21 the procedure for reflecting the results of  
22 management audits that is typically used by the  
23 Commission, be enhanced to ensure that customers  
24 receive the benefits of the audit's

1            recommendations as soon as possible.

2    Q.    What specifically do you recommend?

3    A.    We recommend that the Company identify, in its  
4            rebuttal testimony, the recommendations of the  
5            Final Report which can be implemented, in whole  
6            or in part, in time to help reduce Con Edison's  
7            costs in the rate year. The Company should also  
8            provide an estimate of the associated costs and  
9            benefits. The Commission should consider  
10           incorporating the net savings in its revenue  
11           requirement determination. Alternatively, the  
12           Commission could direct that the Company defer  
13           the net impact for future disposition.

14                    In addition, any multi-year rate plan  
15           adopted in this proceeding should include a  
16           provision for the Company to submit information  
17           regarding the timing and associated costs and  
18           savings of implementing the audit's  
19           recommendations as part of the staged filings we  
20           discussed previously. The resulting net impact  
21           could then be reflected in the Commission's  
22           revenue requirement determination for the  
23           Company.

24    Q.    Assuming the Company puts this cost/benefit

1 analysis in its rebuttal filing, what process  
2 does the Panel propose concerning the review of  
3 that information?

4 A. We propose that, if necessary, Staff be allowed  
5 to file surrebuttal testimony in order to have  
6 an opportunity to change its current, or make  
7 further, recommendations as appropriate.

8 Q. Does this conclude your testimony at this time?

9 A. Yes.
