

BUSINESS PROCESSES – CONSUMPTION HISTORY

This document describes the detailed business processes for requesting customers' consumption history data in the State of New York. In developing these business processes, the content of the following documents was considered:

- June 30, 1999 Report of the New York EDI Collaborative
- Case 98-M-1343 and Case 98-M-0667, Order Modifying Electronic Data Interchange (EDI) Standards and Uniform Business Practices, issued and effective May 19, 2006
- NY EDI TS814 Enrollment Request and Response Standard v. 2.0
- Order Taking Actions to Improve the Residential and Small Nonresidential Retail Access Markets, issued and effective February 25, 2014 in Case 12-M-0476 et.al.

NOTES:

- Any item displayed under a Process component, i.e. rules; etc. is also applicable for its sub-processes, unless otherwise noted.
- All Customer information is considered confidential and customers may request that the Utility block the release of data to all ESCOs.
- A separate Consumption History Request must be received for each commodity, (i.e. electric or gas).
- For purposes of validating initial and subsequent EDI transactions, the ESCO must provide the customer's utility account number (with check digit, if included). If the utility account number is not sent, the drop request will be rejected
- The source of various Process Rules and Recommendations listed in this document is indicated by the following annotations which precede each rule:
 - [UBP] = NY Uniform Business Practices
 - [CWG] = Collaborative Work Group or Case 12-M-0476 EDI Working Groups¹

¹ The processes contained herein were reviewed and updated by the Case 12-M-0476 EDI Working Groups.

BUSINESS PROCESSES – CONSUMPTION HISTORY

- [CWG][UBP (insert paragraph cite)] = Collaborative Work Group clarification, interpretation, comment or recommended modification of the Practices to accommodate Electronic Data Interchange. The following abbreviations are used for UBP Section references:
- | | |
|--------|--|
| – DEF | Section 1 Definitions |
| – ELIG | Section 2 Eligibility Requirements |
| – CRED | Section 3 Creditworthiness |
| – CI | Section 4 Customer Information |
| – CSP | Section 5 Changes in Service Providers |
| – Cinq | Section 6 Customer Inquiries |
| – UI | Section 7 Utility Invoices |
| – DISP | Section 8 Disputes Involving Distribution Utilities, ESCOs or Direct Customers |
| – B&PP | Section 9 Billing and Payment Processing |
- Although transactions may be sent to Utilities at any time, they will only be processed during Utility normal business days and hours. Utilities are expected to respond to historical usage requests within two business days. For example, if the required response time is two business days and a Utility receives a valid historical usage request at its Web server at 3:00 AM on Day 1, the Utility must respond by the close of business on Day 2. If the request were received at 8:00 PM on Day 1, the Utility would respond by the close of business on Day 3.
 - The response to a successful request for Consumption History will be an 814 Accept Response transaction and an 867 with consumption history as available from the utility, or, for off system accounts, data will be made available in a non-EDI format. An accepted Request for Consumption History will result in one of the following:
 - For electric - 12 months (or 24 months) of a customer's historic consumption or consumption for the life of the account
 - For Gas - 12 months (or 24 months) of a customer's historic consumption or consumption for the life of the account
 - For Gas - Gas profile data for a 12 month period
 - When Historic Consumption requests are accepted, the Utility will indicate in its Response transaction whether the consumption data will be sent via EDI (ASI=WQ) or non-EDI (ASI=AC). (**NOTE:** Consumption history data on “Off-system” accounts will not be transmitted via EDI).
 - Within its Utility Maintained EDI Guide, a utility will identify a Standard Period, i.e. the standard number of months (12 or 24 months) it provides in response to a request for historic interval data and/or usage data (to the extent data is available for the customer). Arrangements for access to a customer’s historic interval data and/or usage data in excess of the Standard Period must be made directly with the applicable

BUSINESS PROCESSES – CONSUMPTION HISTORY

utility since this data may not be returned in a TS867 transaction. However, the most recent Standard Period of consumption history for electric customers whose usage is measured in intervals will be sent in summary form in a TS867 Consumption History/Gas Profile transaction.

- Where applicable, gas profiles may be updated periodically and may be made available in a non-EDI format on the Utilities' web site. Note that gas profile data is not available from all utilities.
- If applicable, the Comments section for each business process is used to clarify how EDI processing rules may affect specific uniform business practices.
- When an ESCO submits an 814 HU Request to a utility that employs a single block (which blocks both HU and Enrollment together), if no Customer Account Block is in place:
 - An 814 HU ACCEPT Response will be sent and if HU is available, it will be followed by an 867 HU.
 - If there is no historic usage available for the account but non-usage data is available, an 814 HU ACCEPT Response with Status (1P) code HUL will be sent. The 867 would contain only the PTD*FG loop with whatever limited information is available.
 - If neither historic usage or non-usage data is available for the account, an 814 HU REJECT Response with Reject (7G) code HUU and REF03 text will be sent. The 867 HU will not be sent. When non-usage data becomes available, the ESCO may contact the utility to request the data that that would have been provided in the PTD*FG loop, if it had been available. The utility will define how to manually the provide PTD*FG data.
- When an ESCO submits an 814 HU Request to a utility that employs a single block (which blocks both HU and Enrollment together), if an Customer Account Block is in place an 814 HU REJECT Response with Reject (7G) code CAB will be sent. The 867 HU will not be sent.
- When an ESCO submits an 814 HU Request to a utility that employs a dual block, if no HU Block is in place:
 - An 814 HU ACCEPT Response will be sent and if HU is available, it will be followed by an 867 HU. If the account has an Enrollment Block, the 867 HU would contain REF*ZV*EB to notify the ESCO that there is an Enrollment Block on the account.
 - If the account does not have any historical usage, an 814 HU ACCEPT Response with Status (1P) code HUL. The 867 would contain only the PTD*FG loop with whatever limited information is available, including the REF*ZV*EB, if appropriate, to notify the ESCO if there is an Enrollment Block.
- When an ESCO submits an 814 HU Request to a utility that employs a dual block, if an HU Block is in place an 814 HU REJECT Response with Reject (7G) code HUR will be sent. The 867 HU will not be sent.

BUSINESS PROCESSES – CONSUMPTION HISTORY

PROCESS NUMBER:	HU0
PROCESS NAME:	PROCESS CONSUMPTION HISTORY REQUEST -PARENT PROCESS
PROCESS DEFINITION:	The process by which an ESCO may request, and the Utility may provide, customers' consumption history data either independent of, or, in conjunction with, an Enrollment Request.
TRIGGER(S):	ESCO determines need for consumption history information.
ESTIMATED / PEAK TRANSACTION RATE:	See subprocesses.
PROCESS INPUTS:	Utility Information, ESCO Information, Customer Information, Service Information, Request Type (Historic Usage or Gas Profile). Refer to the Data Dictionary of the 814 Enrollment Request & Response and 814 Consumption History Request & Response for a detailed description of the process input data elements.
PROCESS OUTPUTS:	An accepted 814 HU Request will result in receipt of an 814 HU Response transaction and an 867 HU transaction containing consumption history for the most recent Standard Period (or the life of the account if shorter). Arrangements for interval data on electric accounts, consumption history for certain 'off system' accounts, and consumption history in excess of the Standard Period must be made directly with the applicable Utility. In these instances, the data will generally NOT be made available in EDI format. Response to Request May Include: Utility Information, ESCO Information, Customer Information, Service Information, & Response Type (history or profile). See the 814 Consumption History/Gas Profile Data Dictionary for details. <u>Negative Response to an 814 Request:</u>

SUB OR PRECEDING PROCESSES:	<ol style="list-style-type: none"> 1. ESCO submits Request transaction. 2. Utility validates Request transaction. 3. If request is rejected, a rejection reason will be sent. 4. Utility processes gas profile information.
PROCESS RULES:	<p>[CWG] In instances where there is insufficient historic data to calculate the profile, a Utility that provides gas profiles will reject the request with a message indicating that the ESCO should request historic usage.</p> <p>[CWG] The gas profile will NOT be provided using EDI when an account is billed off-system.</p>

DRAFT

BUSINESS PROCESSES – CONSUMPTION HISTORY

CONSUMPTION HISTORY BUSINESS PROCESS FLOWS

Scenario A - Request for Consumption History in an Enrollment Request Transaction

The following represents the steps involved in providing consumption history to the ESCO when the request is included as a secondary request with an 814 Enrollment transaction. The Utility processes both the Enrollment and the history request. The Utility will respond to the history request with an 814 Response transaction indicating one of the following:

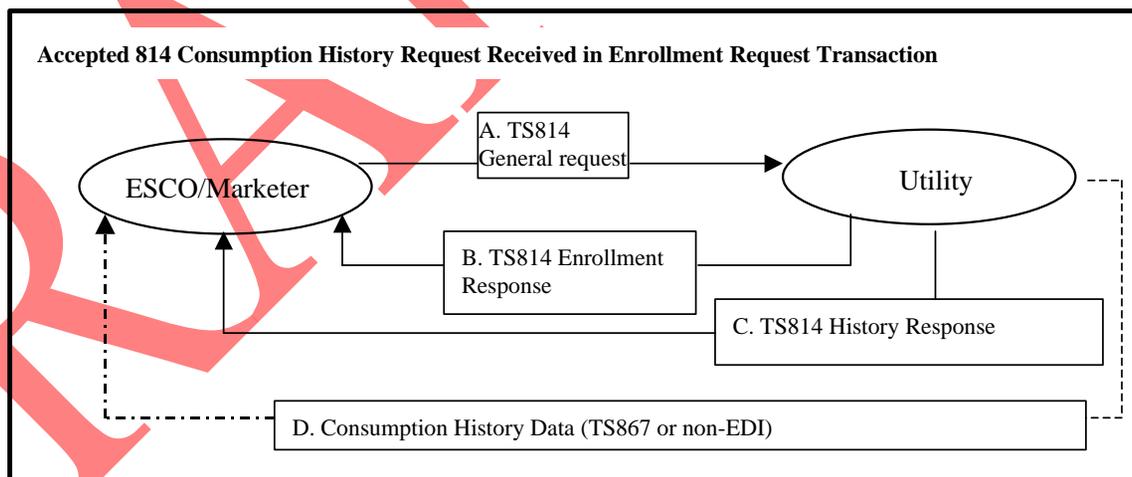

- The Request has been accepted (ASI=WQ) (an 867HU containing the data will be sent).
- The Request has been acknowledged (ASI=AC) and details regarding the response and/or the data will be sent non-EDI.
- The Request has been rejected and the reason for the rejection.

In the first instance only will the 867 Usage History or 867 Projected Gas Delivery Profile be sent. This diagram depicts the process for the first instance.

Notes:

Process Steps

- ESCO sends 814 Request to the Utility.
- Utility processes Enrollment Request and sends 814 positive response.
- Utility processes History request and sends 814 positive or negative response.
- If 814 History Response is positive, Utility sends Consumption History.

- All EDI transactions require that the recipient return a TS997 Acknowledgement.
- If the primary 814 Enrollment request is rejected, the secondary 814 Usage History Request is also rejected.
- Refer to the Enrollment Request & Response Implementation Guide and/or the Implementation Guide for Consumption History Request & Response.

BUSINESS PROCESSES – CONSUMPTION HISTORY

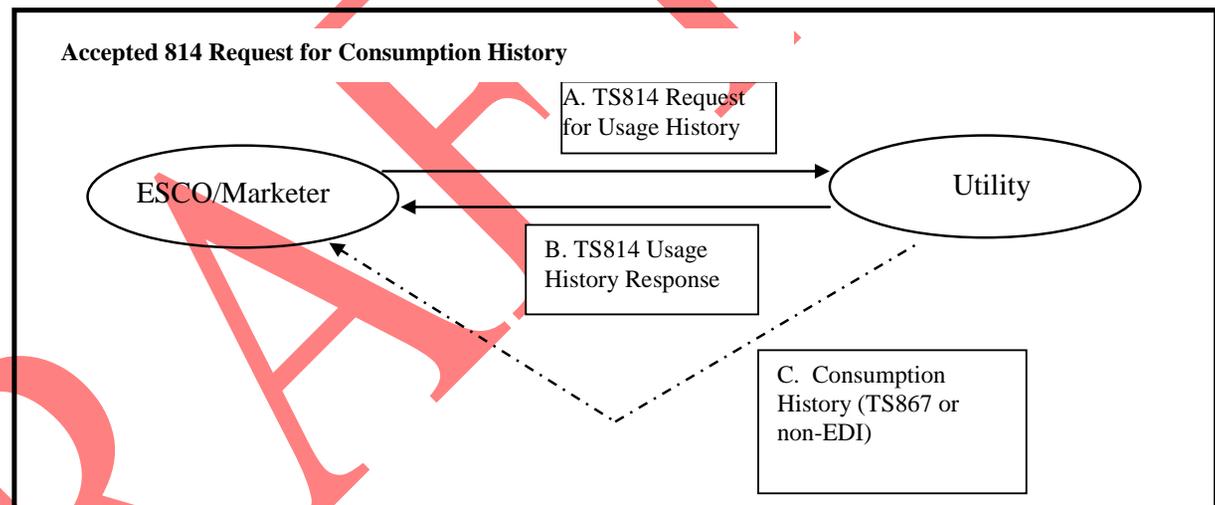

Scenario B - Request for Historic Usage (up to the most recent number of months in a Standard Period)

The following represents the steps involved in providing historic usage to the ESCO when the request is sent independent of an Enrollment transaction. The Utility processes the historic usage request. The Utility responds to the historic usage request with an 814 Response transaction indicating one of the following:

- The Request has been accepted (a TS867 containing the data will be sent).
- The Request has been acknowledged and response details and/or data will be processed non-EDI.
- The Request has been rejected and the reason for the rejection.

Process Steps

- ESCO sends 814 request to the Utility.
- Utility processes request and sends TS814 positive or negative response.
- Utility sends Consumption History in an 867 transaction.

Note:

- All EDI transactions require that the recipient return a TS997 Acknowledgement.

BUSINESS PROCESSES – CONSUMPTION HISTORY

Scenario C - Process Request for Historic Usage for Periods Greater than the Standard Period (Non – EDI)

The following represents the steps involved in providing usage history beyond the Standard Period to the ESCO. The Utility processes the usage history request. The Utility responds to the usage history request indicating whether or not it will be sent.

Process Steps

- ESCO sends request to the Utility.
- Utility processes request and sends positive or negative response.
- Utility sends Historic Usage in non-EDI format.
